

FULL VERSION OF PENDING CLAIMS

1 1. (Currently Amended): A portable telephone device which receives contents
2 information distributed from a server in response to a request made by a user for the contents
3 information, the portable telephone device comprising:

4 a display panel which displays the received contents information thereon;

5 a backlight which lights up the display panel;

6 a request detecting means for detecting that the request has been made; and

7 a reception judgment means for judging whether the contents information is
8 received within a predetermined period of time since the request detecting means detects that the
9 request has been made;

10 a display control means for (a) in a case where the contents information is
11 received, displaying on the display panel the received contents information when the contents
12 information is received, and (b) in a case where the contents information failed to be received,
13 displaying on the display panel a message indicating that that contents information failed to be
14 received when the predetermined period of time has elapsed; and

15 a lighting control means for (a) in the case where the contents information is
16 received, turning off the backlight when after the request detecting means detects that the request
17 has been made until the contents information is displayed and turning on the backlight when the
18 contents information is displayed and (b) in the case where the contents information failed to be
19 received, turning off the backlight after the request detecting means detects that the request has
20 been made until the message is displayed and turning on the backlight after when the contents
21 information message is received displayed.

1 2. (Original): The portable telephone device of Claim 1, wherein
2 the lighting control means turns on the backlight when the lighting control means
3 detects completion of a display procedure for displaying the received contents information on the
4 display panel.

1 3. (Original): The portable telephone device of Claim 2, wherein
2 the display procedure displays a portion of the received contents information on
3 the display panel.

1 4. (Original): The portable telephone device of Claim 3, wherein
2 the request detecting means includes an instruction accepting unit for accepting
3 from the user an instruction for requesting the contents information, and detects that the request
4 has been made by detecting the instruction.

1 5. (Cancelled)

1 6. (Original): The portable telephone device of Claim 3, wherein
2 the request detecting means includes an instruction accepting unit for accepting
3 from the user an instruction for requesting the contents information, and detects that the request
4 has been made by detecting transmission of the instruction.

1 7. (Cancelled)

1 8. (Original): The portable telephone device of Claim 2, wherein
2 the display procedure displays all of the received contents information on the
3 display panel.

1 9. (Original): The portable telephone device of Claim 8, wherein
2 the request detecting means includes an instruction accepting unit for accepting
3 from the user an instruction for requesting the contents information, and detects that the request
4 has been made by detecting the instruction.

1 10. (Cancelled)

1 11. (Original): The portable telephone device of Claim 8, wherein
2 the request detecting means includes an instruction accepting unit for accepting
3 from the user an instruction for requesting the contents information, and detects that the request
4 has been made by detecting transmission of the instruction.

1 12-15. (Cancelled)
